DESCRIPTION

e-Joy

JOY PREPAYMENT SOLUTION assures that the utilities can now budget for their own pay bills for electricity, water, gas and heat use. The system is divided into 6 major functional areas including System Setup & Management, Registration, Vend, Engineering, Device, and Report. The user interface design is intuitive and user friendly. Users may simply drag and drop icons to form individualized home page, making browsing quick and efficient.

FEATURES

- » Support multiple utilities
- » Support STS vending and management protocol
- » Client and Sever Architecture
- » Online or offline vending
- » Scalable Allow multiple vending clients and online vending
- » Support MySQL, SQL2005 or above
- » Flexible unlimited tariff tables supporting free basic electricity, tax, fixed rates, variable rates, step rates etc.
- » Customized home page
- » Reports automatically emailed to authorized managers
- » Support switch from post-payment to prepayment
- » Multiple languages available
- » Support mobile recharge, prepaid card vending etc.
- » Different levels of user assess privileges
- » An underlying API that allows quick integration with financial systems, banking systems, POS etc.

FUNCTIONS

System Setup & Management

Supports all system related information and activities, such as cities, operators and tariff rates etc.

Registration

Supports registration of meter stores, meters, locations and consumers.

Vend

Generates 20-digit credit tokens.

Engineering

Issues special engineering tokens for test and maintenance, such as clear tamper, clear credit and do key change for the meter, etc.

Device

Handles the secure module configuration and key file importation and view.

Reports:

Supports all types of reports including customer reports, vending reports, cash reports etc.
